

Help Get Your Cat Back to Their “Normal”

with the only
FDA-approved treatment for
cat osteoarthritis (OA) pain

IMPORTANT SAFETY INFORMATION: For use in cats only. Women who are pregnant, trying to conceive or breastfeeding should take extreme care to avoid self-injection. Allergic reactions, including anaphylaxis, could potentially occur with self-injection. Solensia should not be used in breeding cats or in pregnant or lactating queens. Solensia should not be administered to cats with known allergy to frunevetmab. The most common adverse events reported in a clinical study were vomiting and injection site pain. [See attached full Prescribing Information.](#)

WHAT IS CAT OA PAIN?

It's a condition that can seriously affect your cat's health and well-being

OA is a type of arthritis that happens when the **protective tissue in the joints (cartilage) is worn down**, causing bones to rub against one another.

You may think OA just makes moving harder, but it can also cause severe pain. **It can happen to cats at any age, not just older cats.**

OA pain is chronic pain that's always there. It doesn't go away and can get worse without the right treatment. Chronic pain is different from acute pain, which is pain that lasts a short time and gets better, like that from a cut, scratch, or a pulled muscle.

Without treatment, the pain will continue to get worse. This can affect their quality of life and the antics that make your cat, "your cat."

IMPORTANT SAFETY INFORMATION: For use in cats only. Women who are pregnant, trying to conceive or breastfeeding should take extreme care to avoid self-injection. Allergic reactions, including anaphylaxis, could potentially occur with self-injection. Solensia should not be used in breeding cats or in pregnant or lactating queens. Solensia should not be administered to cats with known allergy to frunevetmab. The most common adverse events reported in a clinical study were vomiting and injection site pain. See attached full Prescribing Information.

HAS YOUR CAT STOPPED ACTING LIKE “YOUR CAT”?

It could be from OA pain

Cats hide almost everything, especially pain. A good way to tell if your cat might be dealing with OA pain is to see whether or not they're having trouble doing some of these things*:

Jumping up

Jumping down

Climbing up stairs

Climbing down stairs

Chasing moving objects

Running

Use the Cat OA Pain Checklist quiz to see how your cat's movements compare with a healthy cat's movements, and share your results with your vet.

HELP GET YOUR CAT BACK TO THEIR “NORMAL”

What is Solensia™ (frunevetmab injection)?

Solensia is the **FIRST and ONLY FDA-approved treatment to control cat OA pain**. You and your vet can feel confident that it's been studied and shown to help cats get back to moving more freely again.

In a study, cat owners also reported **Solensia not only helped cats control their OA pain, but it also improved their quality of life**. Study results showed better general mobility, comfort, and overall well-being of cats.¹

As a once-monthly shot given by your vet, **Solensia can keep OA pain from changing the unique bond your cat shares with you**.

IMPORTANT SAFETY INFORMATION: For use in cats only. Women who are pregnant, trying to conceive or breastfeeding should take extreme care to avoid self-injection. Allergic reactions, including anaphylaxis, could potentially occur with self-injection. Solensia should not be used in breeding cats or in pregnant or lactating queens. Solensia should not be administered to cats with known allergy to frunevetmab. The most common adverse events reported in a clinical study were vomiting and injection site pain. See attached full Prescribing Information.

IT'S TIME TO TALK TO YOUR VET ABOUT SOLENSIA™ (frunevetmab injection)

How it works and what to expect

Solensia controls OA pain in cats, which can lead to an easier time moving.¹

Solensia works like your cat's naturally made antibodies to reduce pain signals. It's a type of medicine called a biologic (a protein, not a chemical) that targets a root cause of your cat's OA pain.²

77%

77% of cat owners experienced seeing improvement in signs of pain when their cats were treated monthly with Solensia in a 3-month study.^{3*}

Overall, the most common side effects for Solensia that occurred in the clinical study were vomiting and injection site pain.³

*67% of cat owners experienced improvement in signs of their cat's pain in the placebo group.

IMPORTANT SAFETY INFORMATION: For use in cats only. Women who are pregnant, trying to conceive or breastfeeding should take extreme care to avoid self-injection. Allergic reactions, including anaphylaxis, could potentially occur with self-injection. Solensia should not be used in breeding cats or in pregnant or lactating queens. Solensia should not be administered to cats with known allergy to frunevetmab. The most common adverse events reported in a clinical study were vomiting and injection site pain. See attached full Prescribing Information.

YOU CAN HELP MONTHLY VISITS FEEL MORE NORMAL FOR YOUR CAT

How to prepare for a visit

A monthly visit to the vet can be stressful for you and your cat, but it doesn't need to be! Here are some tips and tricks you can use to help make it easier.

Solensia™
(frunevetmab injection)

Before your visit

Make the carrier less scary by setting it up at home

Keep your cat calm by using spray pheromones

Practice examining your cat from head to tail to get them used to being handled

Bring your cat on regular car rides to disassociate the car with going to the vet

During your visit

When in the waiting room, keep your cat in their carrier so they feel more secure

Schedule your monthly appointments during slow times to reduce your cat's stress

Bring something from home, like a blanket, to help comfort your cat

If your cat has a history of being stressed, talk to your vet about possible medications or supplements

Learn more about steps to a stress-free vet visit for you and your cat.

MAKE THE MOST OUT OF EVERY MONTH

Don't forget to track your cat's progress

Video your cat: You may find it helpful to take a video of your cat's movements with your smartphone and share it with your vet at your next monthly visit.

Write it down: Remembering changes in your cat's behavior isn't easy—especially over the course of a whole month. Keeping a written log of your cat's progress can be a useful way to ensure your vet gets all of the information they need.
